Mr. Leland Tate, Vice President
Engineering and Extension Exploration
ARCO Alaska, Inc.
P. O. Box 360
Anchorage, AK 99510

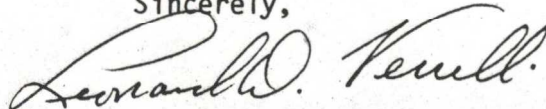

Dear Mr. Tate:

Your letter of December 5, 1983 requested administrative changes to the air quality permits for the various air pollutant emitting facilities at Prudhoe Bay. The request has been determined to be complete in providing the necessary information needed for us to make a decision.

Since there will be no appreciable increases in ambient impacts near the various facilities, and no increase in total emissions in the field, the proposed revisions are approved. The individual facilities will require modified air quality permits from the state incorporating the proposed changes and all applicable requirements in our current regulations. The state permits will then include all applicable federal Prevention of Significant Deterioration (PSD) requirements. Also, Mr. Schuyler of your office requested, in a letter received December 22, 1983, the inclusion of three small turbines into the permit for Flow Station 3. As these turbines have already been incorporated into previous PSD submittals, they will be added during this revision of the state permits.

Permits for the facilities affected by this field refinement will be issued within the next thirty days.

Sincerely,

Leonard D. Verrelli
Air Quality Program Manager
